Home

The goal of the **SIEMPRE** project is to develop novel research theoretical and methodological frameworks, computational models, and algorithms for the analysis of creative communication within groups of people. Research in SIEMPRE is focused on ensemble musical performance and audience experience, an ideal test-bed for the development of models and techniques for measuring creative social interaction in an ecologically valid framework. In particular, the focus is on exploring interpersonal interaction in

1. **musician-musician**
2. **conductor-musicians**
3. **music-listener**
4. **musician-listener scenarios.**

Human-Computer Interaction, 31(3-4), pp. 335-383.

Emotional Wellbeing Technologies

Treatment for Parkinson disease

Objective: reduce the hesitation in movement; quantitative evaluation of the hesitation.

The patient uses his body as a «brush» to paint on three walls in the room, and create a sonification: but only if his movement is fluid!

Paradigm of interaction:
Aesthetic Resonance
Slow Mood

Interactive sonification of movement qualities

- How to “translate” mid-level movement qualities to the auditory channel? Sensory substitution or enhancement: “to hear the dance” (DANCE EU ICT project: dance.dibris.unige.it)
  - Cross-modal correspondences (e.g. Spence 2011),
  - Cognitive neuroscience: which audio features? e.g. *spectral flux, beat salience* (e.g. Weineck, Xin Wien, Henry 2022)
  - Artistic theories: e.g., Pierre Schaeffer’s Morphology in Musique Concrete; Rudolf Laban’s Theory of Effort in dance

Niewiadomski, Mancini, Cera, Piana, Canepa, Camurri (2019) Does embodied training improve the recognition of mid-level expressive movement qualities sonification? *Journal on Multimodal User Interfaces*.

How to assess and validate models of interactive sonification of movement qualities?

1. Assess computational models against neuroimaging measures of human participants:

M.J Vaessen, E. Abassi, M. Mancini, A. Camurri, B. de Gelder (2019)
Computational Feature Analysis of Body Movements Reveals Hierarchical Brain Organization
Cerebral Cortex

2. A family of serious games: compare different sonifications of the same movement feature against the embodied movement response of users exposed to the sonification (comparison of the measured movement quality of users against the movement feature that generated the sonifications).

K. Kolykhalova, P. Alborno, A. Camurri, G. Volpe (2016)
A serious games platform for validating sonification of human full-body movement qualities
